followed by drinks

Where: AMREP Seminar Room, Alfred Medical
Research and Education Precinct,
75 Commercial Rd, Melbourne, Victoria

RSVP: Friday, 6 June 2014
Register online www.armlaunch.eventbrite.com.au

LAUNCH

www.arm.org.au

ARM Network is dedicated to facilitating the deployment of qualified Australian field epidemiologists and other public health specialists in the event of global, regional, and cross-jurisdictional infectious diseases emergencies.

Speakers include:

ARM Co-Directors, Dr Tony Stewart, Associate Professor Martyn Kirk and Professor Raina MacIntyre, representatives of RedR and other agencies, and specialists who have been previously deployed to international public health emergencies.

Come along and join the discussion about the future direction of ARM and Australia's public health response capacity during outbreaks and emergencies.

ARM Network:

ARM Network was formed by group of alumni of the ANU Master of Applied Epidemiology Program, Australia's only field epidemiology training program. ARM is a focal point for identifying, screening and referring skilled field epidemiologists and other public health professionals for deployment through established mechanisms to respond to global, regional or cross-jurisdictional infectious diseases emergencies. The foundation partner institutions tap into their networks of infectious diseases expertise for deployment, but others with relevant skills can also join ARM.
